HP laptop with 3G Embedded modem: APN Setting Change Guide

This document shows step by step how to change the Access Point Name (APN) setting of your HP laptop with 3G Embedded modem. This enables you to upgrade your **Optus Wireless Broadband** service to an Optus **Business Mobile Broadband** service.

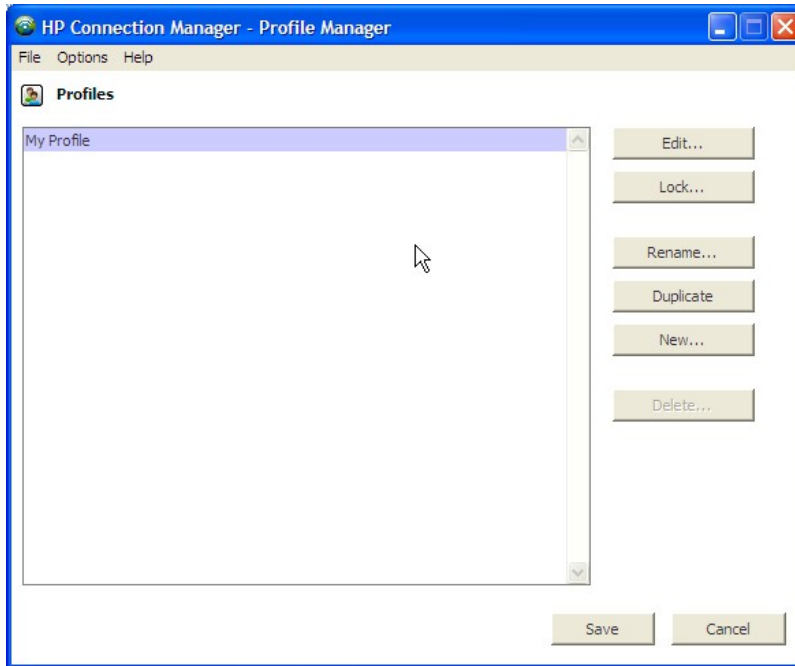

This work instruction is for end customers using an HP laptop with 3G Embedded modem to access their Optus Business Mobile Broadband service. To access the service the APN setting must be changed from "connect" to "yesbusiness".

To change the APN setting on your laptop with a 3G embedded modem please following the steps outlined below:

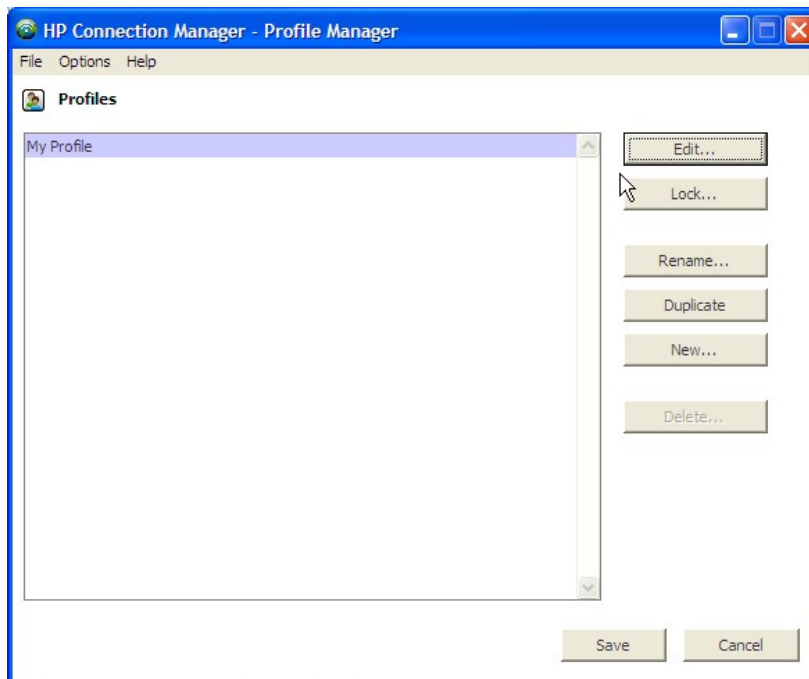

Step 1: Open the HP Connection Manager

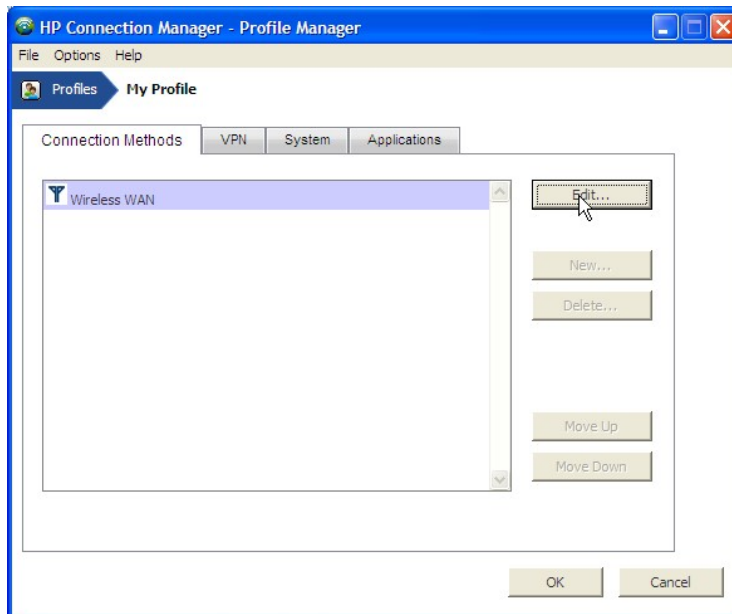

Step 2: Select “Tools” then “Profile Manager”

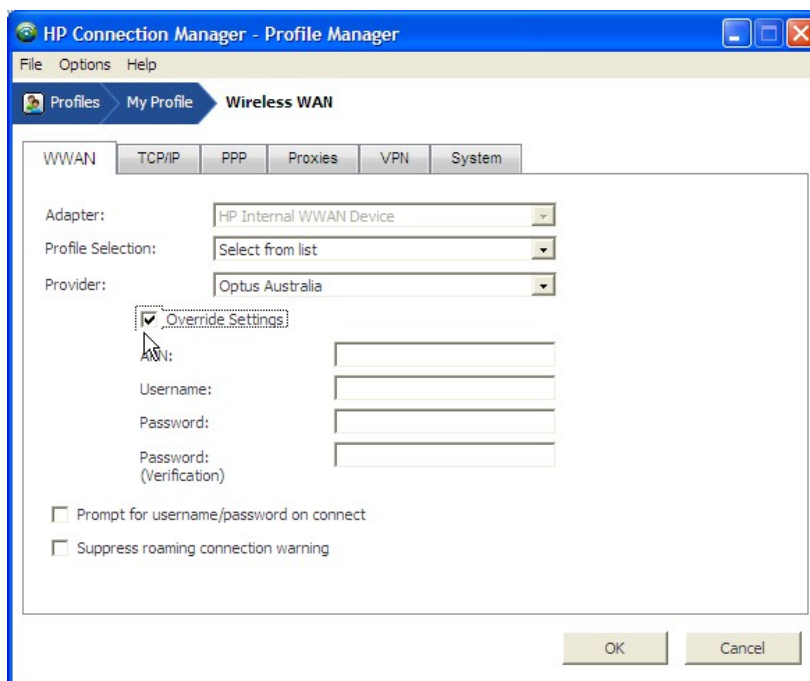

Step 3: Highlight “My Profile” and select “Edit”

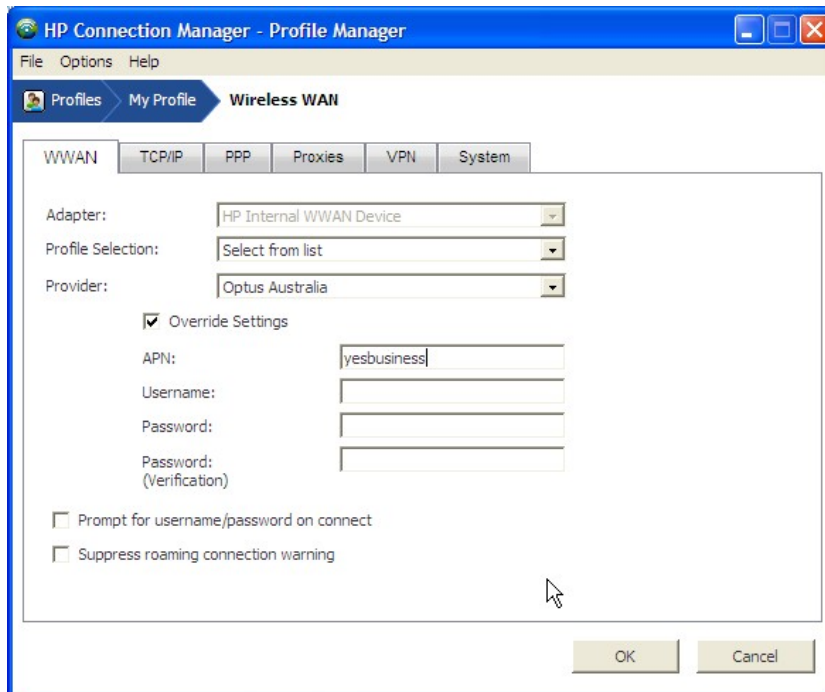

Step 4: Highlight “Wireless WAN” and Select “Edit”

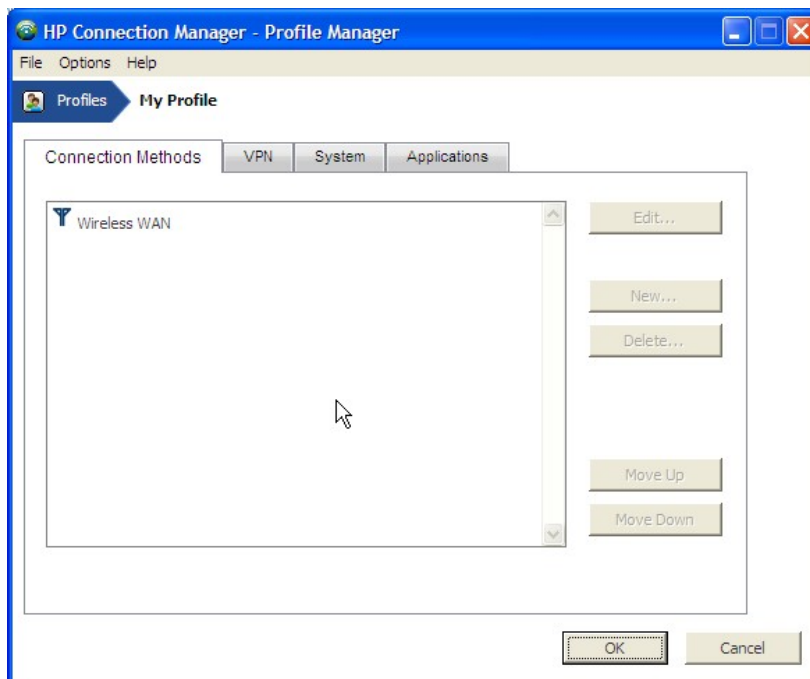

Step 5: Tick “override settings”

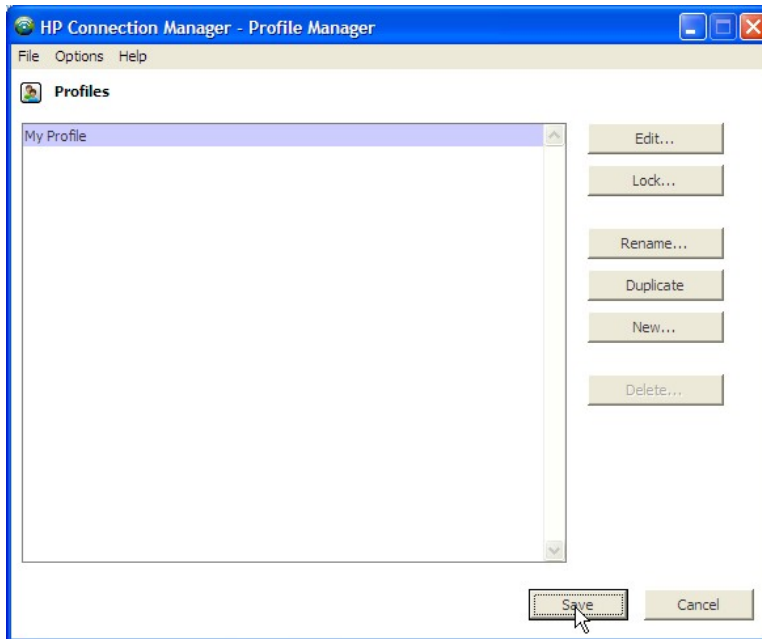

Step 6: Type "yesbusiness" in the APN field and select "OK"

Step 7: Select "OK"

Step 8: Select "Save"

Step 9: Select "Connect"

You have now changed the APN setting on your laptop and will be able to connect to your new Optus Business Mobile Broadband service when ever you browse the internet using your laptops web browser.

If you encountered any technical difficulties in following the above process please contact Optus Premium Managed Technical Support (PMTS) on 1300 130 765.
