Toshiba laptop with 3G Embedded modem: APN Setting Change Guide

This document shows step by step how to change the Access Point Name (APN) setting of your Toshiba laptop with 3G Embedded modem. This enables you to upgrade your **Optus Wireless Broadband** service to an **Optus Business Mobile Broadband** service.
This work instruction is for end users who use a Toshiba laptop with 3G Embedded modem with a Optus Business Mobile Broadband service. To access the service the APN setting must be changed from "connect" to "yesbusiness".

To change the APN setting on your laptop with a 3G embedded modem please following the steps outlined below:
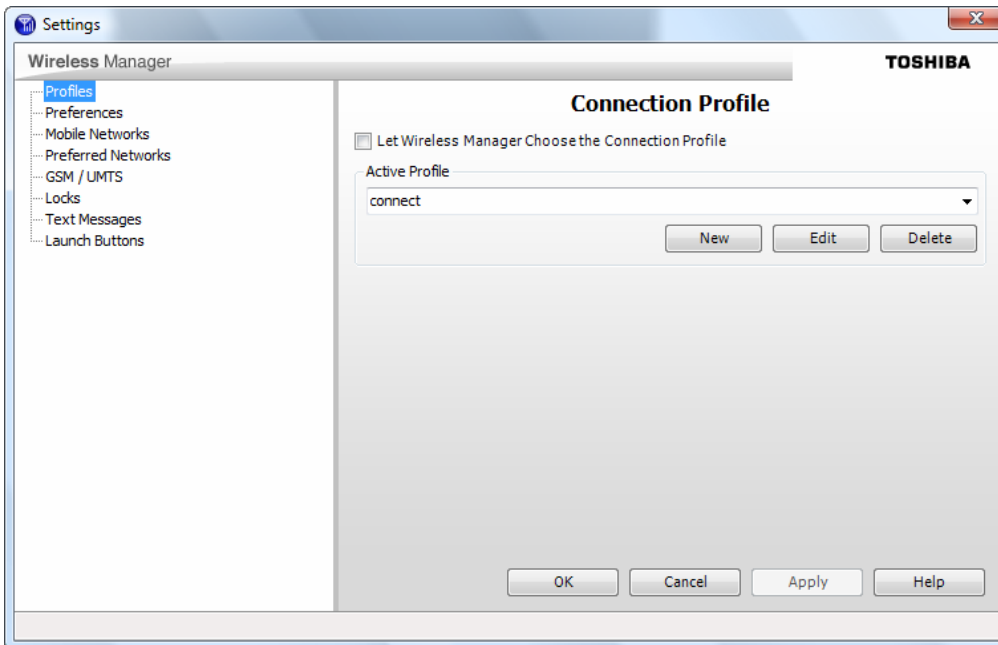

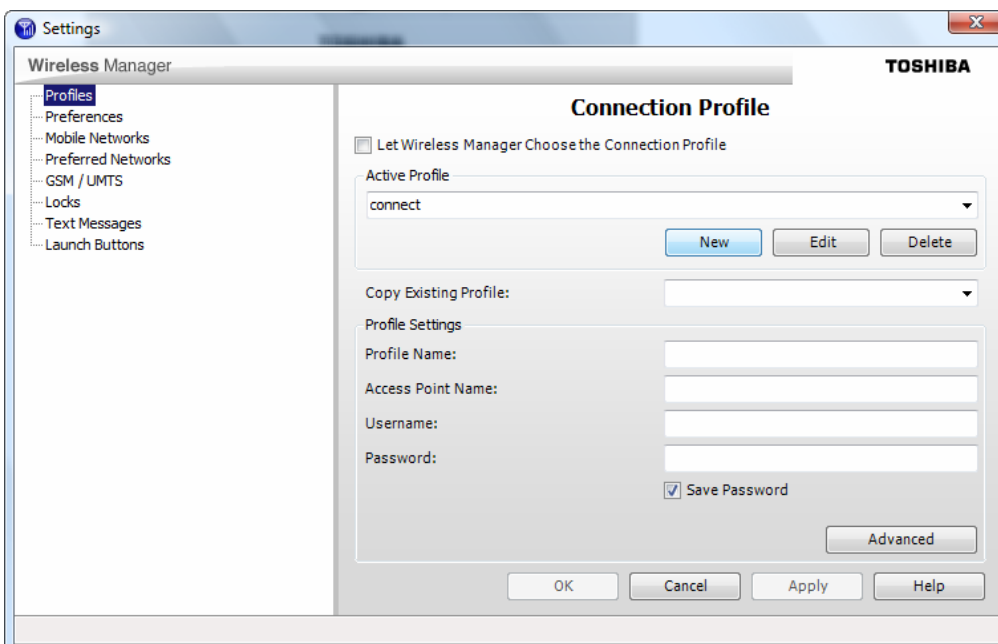

Step 1: Open the Toshiba 3G Wireless Manager

Step 2: Select "View" then "Settings"
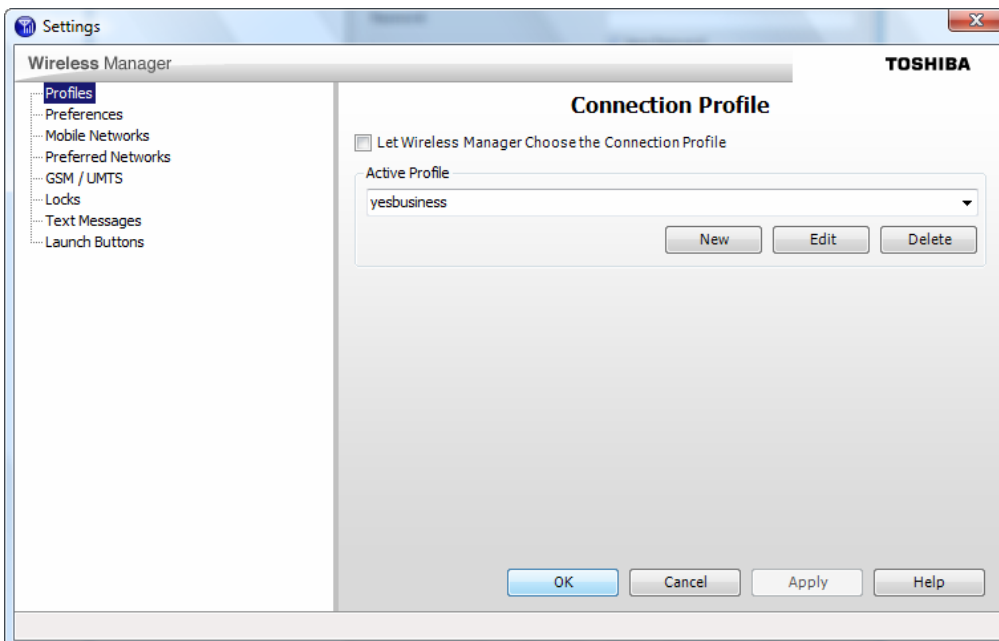

Step 3: Highlight "Profiles"

Step 4: Select "New"

Step 5: Enter yesbusiness in the profile name and Access point name and select "Apply"

Step 6: Select "OK"

Step 7: Select "Connect" to connect to your Optus Business Mobile Broadband service.

You have now changed the APN setting on your laptop and will be able to connect to your new Optus Business Mobile Broadband service when ever you browse the internet using your laptops web browser.

If you encountered any technical difficulties in following the above process please contact Optus Premium Managed Technical Support (PMTS) on 1300 130 765.
